

ENTERPRISE VALUE INSIGHTS

Meridian Logistics Value Review

April 1 to July 24, 2026: full Q2 plus July to date, covering portal adoption, support, workflow automation, and device health.

Sample data, for portfolio demonstration

CONFIDENTIAL

Adoption is steady; the gaps are geofence coverage and driver training

342,180

Portal actions

248,600

Stops completed

1,420

Support cases

99.6%

eRODS transfers

Portal actions and support: Apr 1 to Jul 24. Stops: 16 reported weeks to Jul 20. eRODS: 17 weeks to Jul 27. Devices: snapshot of Aug 1.

WHAT IS WORKING

Portal usage is steady month over month, unassigned driving time runs almost entirely in the modern tool, and no tablet is critically low on storage.

WHERE TO FOCUS

Two gaps stand out: 19% of stops are not geofenced, and 29% of support calls could be closed by a trained driver.

Driver records lead usage, with unassigned time already in the modern tool

MONTHLY ACTIVITY, JULY PARTIAL

RIGHT TOOL, RIGHT TASK

Meridian works unassigned driving time where it belongs: 19,300 actions in the modern tool against 1,230 in the legacy view.

Recommended next step

Retire the legacy view from the audit team's bookmarks.

Nearly three in ten support calls are avoidable with training

COACHABLE CATEGORIES, 29.0% OF ALL CASES

THREE IN TEN CALLS ARE AVOIDABLE

Support closes these by walking the driver through the right form sequence, an HOS log edit, or a password reset, all of it teachable.

What that costs

About 30 minutes out of a driver's day, every time. Quantified on the next page.

Closing the training gap returns 206 hours and about \$5,800

MODELED: 206.0 hrs × \$28.19/hr median wage, heavy and tractor-trailer truck drivers (BLS OEWS, May 2025)

THE REAL COST OF ONE CALL

Pulling over and troubleshooting	10 min
On the phone with support	15 min
Restarting the route	5 min
Per coachable call	30 min

THREE MOVES TO CLOSE THE GAP

- 01 Workflow quick start card: in-cab reference for advancing a stuck stop.
- 02 HOS log micro-videos: 30-second clips on log edits and certification.
- 03 Flag repeat callers: surface high-frequency vehicles to fleet managers.

Two in three arrivals are hands-free; configuration is the ceiling

248,600 STOPS, HOW ARRIVAL IS RECORDED

THE 19% THAT NEVER GEOFENCED

Automation has held within a point of 64% for four months. The ceiling is configuration: about 2,900 stops a week sit outside any geofence.

Recommended next step

Audit the unconfigured locations. Every one converted lifts auto-arrival.

AUTOMATIC ARRIVALS BY MONTH

REVENUE OPPORTUNITY

\$24.7K – \$49.4K

Modeled: 82,287 manually tapped arrivals (33.1% of 248,600 stops) at an assumed \$0.30–\$0.60 saved per stop converted to automatic.

Not an audited metric. Assumes full conversion of the manual-tap segment at the stated per-stop rate.

A stable fleet with a small storage tail to watch

1,850

Trucks reporting weekly

+38 since early May (+2.1%)

TABLET FREE SPACE, SNAPSHOT OF AUG 1

1,912 tablets provisioned, median 12.4 GB free

● Critical, under 1 GB	47
● Warning, 1 to 2 GB	63
● Over 2 GB free	1,802

Worst device: 0.3 GB free

A TAIL, NOT A FLEET PROBLEM

The median tablet holds 12.4 GB free, so this is not a fleet-wide issue. But 47 devices cannot take another update today.

Recommended next step

Clear the 47 critical devices before the next OS release.

Records transfer clean, and device health beats the fleet

99.6%

eRODS transfer success, average across 17 weeks

0.38

Diagnostic events per 100 trucks, per week

vs a fleet median of 0.45, better than average

NO COMPLIANCE EXPOSURE

eRODS transfers average 99.6% and diagnostic events run below the fleet median. The records and hardware sides are both healthy.

WEEK-TO-WEEK CONSISTENCY

17

Weeks reported, Apr to Jul

97.4%

Lowest single week

19th

Lowest DDM rate of 49 carriers

Recommended next step

Hold the line. No remediation needed here.

How this deck gets built

01

Fix the window first

One date range for the deck. Stamp any export that differs on the slide it appears.

02

Pull and reconcile

Portal, support, workflow, devices, compliance. Check totals agree before designing anything.

03

Find the one finding

It becomes the overview focus line and the headline of its own slide.

04

One argument per slide

Every number appears once. Every slide ends in a next step, or says none is needed.

FOUR RULES THAT KEEP IT HONEST

No invented metrics

If it cannot be traced to an export, it does not go on a slide.

One cut per claim

Two exports measuring the same thing will disagree. Never mix them in one sentence.

Real units, not percentages

Gigabytes, hours, stops. A percentage of an unstated base compares nothing.

Name the weak week

Volunteering the exception buys credibility for everything else.
