Technical Success & Operations Strategist, AI Implementation

Data-Driven | Product Utilization | KPI & Process Optimization

Professional Summary

Versatile SaaS operations and customer success professional with experience spanning technical support leadership, technical success, customer operations, and data-driven decision making. Proven track record of improving customer outcomes through process optimization, product utilization analysis, operational reporting, and cross-functional collaboration with Product, Engineering, Customer Success, and Support teams.

Experienced in building dashboards, KPI frameworks, customer segmentation models, and AI-assisted automation tools that transform complex operational data into actionable insights. Led strategic initiatives including product rollout eligibility analysis across 1,700+ customer accounts, customer health reporting, performance measurement frameworks, and operational analytics programs that improved organizational visibility and decision making.

Recognized for bringing structure to ambiguous challenges, developing scalable processes where none previously existed, and translating complex technical and operational problems into actionable solutions. Known for identifying systemic issues, building data-driven frameworks, and driving cross-functional initiatives that improve efficiency, accountability, and customer experience.

Professional Experience

Fleet-Telematics SaaS Company · Remote

Technical Success Architect | 2025 – Present

- Developed AI-assisted applications to automate customer issue analysis, support trend identification, and operational reporting, including custom tools that merge Salesforce case and case-feed data to identify recurring customer issues and emerging technical trends.

- Led customer eligibility and segmentation modeling across 1700+ accounts to support phased product rollouts and prioritization decisions
- Owned milestone-based eligibility analysis for a compliance rollout, identifying which customers qualified for each release phase based on ruleset, hardware, and operational constraints
- Led high-visibility operational initiatives with limited existing documentation or process definition, creating structured frameworks, datasets, and reporting models to support decision-making and execution.
- Supported cross-functional escalation resolution and guided team members through complex technical issues in a fast-paced SaaS environment
- Built foundational datasets and decision frameworks to support structured rollout planning where no prior model existed
- Developed 5+ dashboards (Salesforce, Domo) including customer health, utilization tracking, and eligibility analytics
- Centralized multiple reporting streams into unified KPI dashboards, reducing manual reporting by ~30%
- Partner cross-functionally with Product, Engineering, Operations, and Customer Success to translate data into actionable rollout and adoption strategy
- Presented insights to executive stakeholders to improve visibility into adoption risk, rollout readiness, and systemic issues
- Identified recurring technical defects through log and case trend analysis, informing prioritization and resolution focus
- Designed performance metrics and bonus structure frameworks for Technical Success and Support teams, introducing measurable accountability and standardized evaluation criteria

Technical Support Supervisor (Manager Level 1) | 2022 – 2025

- Led and developed escalation teams supporting complex SaaS environments, improving performance and operational consistency
- Partnered with Product and Engineering to identify and escalate systemic issues, contributing to resolution of high-impact defects
- Built dashboards in Salesforce and Domo to track SLA performance and identify workflow inefficiencies
- Delivered white-glove support strategy for enterprise clients, improving retention and customer trust
- Reduced top call driver by 56% through root cause analysis and cross-functional resolution efforts

Mend Telemedicine — Remote

Senior Manager of Technical Support | 2020 – 2022

- Directed a 15-person support team for telehealth/EHR SaaS platform
 - Led migration from Zendesk to Salesforce Service Cloud, automating ~20% of inbound requests
 - Improved customer experience and operational efficiency through workflow redesign and reporting improvements
 - Partnered cross-functionally to reduce backlog and improve CSAT
-

Skills

Customer Success Operations • Support Operations • Product Utilization Analytics • Customer Health Scoring • Data Analysis • KPI Development • Dashboard Development • Salesforce • Service Cloud • Domo • Jira • Datadog • AI-Assisted Analytics • Process Automation • Root Cause Analysis • Product Rollouts • Customer Segmentation • Executive Reporting • Cross-Functional Leadership

AI & Automation Initiatives

AI-Driven Support Analytics Platform

- Developed custom applications leveraging AI to automate support data extraction, trend analysis, and customer issue identification
- Built tooling that combines Salesforce case reports with case feed data to generate deeper insights into recurring customer issues and emerging technical trends
- Reduced manual analysis effort while improving visibility into root-cause drivers and escalation patterns

Workflow & Dispatch Data Quality Tool

- Developed an application to identify inaccuracies in workflow and dispatch stop data
 - Automated GPS coordinate validation and correction processes to improve location accuracy and operational reporting
 - Enabled more reliable operational analytics and customer-facing workflow performance metrics
-

Selected Achievements

- Established reporting frameworks, operational metrics, and decision-making models for previously undefined business processes, improving visibility and accountability across multiple teams
 - Reduced top call driver by 56% through root cause analysis and cross-functional resolution
 - Increased CSAT by 4% through operational improvements and targeted coaching
 - Built customer eligibility models supporting rollout decisions across 1700+ accounts
 - Centralized multiple reporting streams into dashboards, reducing manual reporting by ~30%
 - Designed KPI frameworks and bonus structure models to improve performance visibility and accountability
 - Influenced product rollout decisions by identifying eligibility constraints related to rulesets, hardware compatibility, and customer readiness
